More specifically, we test the hypothesis that positive family relationships, peer relationships and higher connectedness to school teachers and students will be independently associated with lowered risk of substance use and mental health symptoms, and with increased subjective wellbeing.

School, Peer and Family Relationships and Adolescent ...

Findings from brain imaging studies, where adolescents are in the imagined presence of their peers, indicate that the relationship between peer influence and risk-taking behaviour could be underpinned by adolescents' increased sensitivity to social reward (e.g. acceptance by one's peer group) and/or changes in their levels of arousal (e.g. higher levels of embarrassment).

Peer influence and risk taking behaviour during adolescence

Friends can influence an adolescent's attitudes and behaviors in ways that matter across multiple domains of health and well-being, well into adulthood. 1 We often hear about this in the form of peer pressure, which refers more explicitly to the pressure adolescents feel from their friends or peer group to behave in certain ways, good or bad.

Peer Pressure | HHS.gov

Teens and Peer Relationships As previously mentioned, social and emotional maturity are intertwined. Therefore, as teens' emotional maturity increases their relationships with their peers change as they become more vulnerable and emotionally intimate with their peers. This increased vulnerability and intimacy requires greater trust among peers.
