Two basic points are 1) economics is about resource allocation, and 2) efficiency in resource use (getting the most from available resources) in health care can be understood by identifying production functions representing health-care services. Economics is a behavioral science that begins with two propositions about human behavior.

Applying Economic Principles to Health Care - Volume 7 ...

Now, we all know healthcare is very complex, but it's not fundamentally different from other industries. Healthcare simply consists of thousands of interlinked processes that result in a very complex system. If we focus on the processes of care one at a time, we can fundamentally change the game and deal with the challenges facing healthcare.
