Darwin's Theory Of Evolution - The Premise. Darwin's Theory of Evolution is the widely held notion that all life is related and has descended from a common ancestor: the birds and the bananas, the fishes and the flowers -- all related. Darwin's general theory presumes the development of life from non-life and stresses a purely naturalistic (undirected) "descent with modification".

### **Darwin's Theory Of Evolution**

Use Darwinian to describe something that relates to the scientist Charles Darwin or his "survival of the fittest" theory of evolution. A naturalist who studies evolution and natural selection — scientific theories that were first developed in the 1800's by Charles Darwin — might call herself a Darwinian. The work and writing of Darwin himself are also called Darwinian, particularly evolution.
