Differential And
Integral Calculus
**Differential And
Integral Calculus By**

Basic calculus explains about the two different types of calculus called “Differential Calculus” and “Integral Calculus”. Differential Calculus helps to find the rate of change of a quantity whereas integral calculus helps to find the quantity when the rate of change is known. Important Calculus

INTRODUCTION

Differentiation is one of the most important fundamental

operations in calculus.

Its theory primarily depends on the idea of limit and continuity of function.

BASIC CONCEPTS OF DIFFERENTIAL AND INTEGRAL CALCULUS

The fundamental concepts and theory of integral and differential calculus, primarily the

relationship between differentiation and integration, as well as their application to the solution of applied problems, were developed in the works of P. de Fermat, I. Newton and G. Leibniz at the end of the 17th century.

Differential calculus and integral calculus are connected by the fundamental theorem of calculus, which states that differentiation is the reverse process to integration. Differentiation has applications to nearly all quantitative disciplines.

acceleration, the slope of a curve, and optimization.

Applications of integral calculus include computations involving area, volume, arc length, center of mass, work, and pressure.

More advanced applications include power series and Fourier series.

Branch of calculus concerned with the theory and applications of integrals. While differential calculus focuses on rates of change, such as slopes of tangent lines and velocities, integral calculus deals with total size or value, such as lengths, areas, and volumes.

**Integral calculus |

Britannica**

Download Free Differential And Integral Calculus By L. C. Rinehart Solution Manual

Differential calculus is basically dealing with the process of dividing something to get track of the changes. On the other hand, Integral calculus adds all the pieces together.

Differentiation deals with the calculation of a derivative which is the instantaneous rate of change of function taking into one of its variables into consideration.
