Electricity and magnetism are based on electron movement. In electricity, electrons flow in a circuit (also creating a magnetic field). In magnetism, electrons are moving together (in an object or along a wire). Electrons in a current (electricity) can make a magnetic field. A magnetic field can also move electrons (to make electricity).

Electricity can make magnets. Each electron is surrounded by a force called an electric field. When an electron moves, it creates a second field - a magnetic field. When electrons are made to flow in a current through a conductor, such as a piece of metal or a coil of wire, the conductor becomes a temporary magnet - an electromagnet. What is the relationship between electricity and magnetism?
