Flora and Fauna. The flora and fauna of the arctic tundra is controlled by cold temperatures and the northern latitude, which restricts the growing of many plants. The arctic tundra is famous for permafrost. Permafrost is a permanent layer of soil which remains below freezing point throughout the whole year. The soil has little space; therefore making it impossible for deep-rooting plants and trees to grow.

The Burren is home to about 1100 plant species, about three quarters of the total flora of 1400 plant species found in the whole of Ireland. The mystique of the Burren flora lies not so much in the frequency of rare species, but in the assemblage or co-habitation of certain plants and the Burren locations they choose.
