Vladimir Cherkassky; Filip Mulier - Learning from Data ...

Data science is a complex discipline that identifies significant information drawn from gigantic amounts of structured and unstructured data.

Probably the hardest part of this field of knowledge is to learn how to make sense of all this data, and

In retrospect, it is clear that there has been an ambiguity in schema theory between a narrow use and a broad use of the term schema. For example, in Rumelhart's classic 1980 paper, he defined a schema as "a data structure for representing the generic concepts
