These valves close all ports in the off position to stop equipment in a locked position with air pressure holding it in place. They create two actions and have two exhaust ports, which allows you to control the speed of each action by attaching a flow control valve to each exhaust port. Also known as 4-way and 5/3 closed center valves.

3-way valves have a supply, outlet and exhaust port. When the toggle is in the “on” position, air flows from the inlet to the outlet and the exhaust port is blocked. Moving the toggle to the “off” position closes the inlet and opens the outlet to the exhaust port which vents the outlet to atmosphere.
