pesticide exposure, but currently chronic heat stress and dehydration are considered key etiologic factors. Responding to persistent community and scientific concerns about the role of pesticides, we performed a systematic review of epidemiologic studies that addressed associations between any indicator of pesticide exposure and any outcome

## **Pesticide exposures and chronic kidney disease of unknown ...**

The health risks from pesticide exposure depend on the toxicity of the pesticides, the amount a person is exposed to, and the duration and the route of exposure. Evidence suggests that children are at greater risk of illness or injury from exposure to pesticides in general, including effects on brain development.

## **Environments Pesticide and Health**

Pesticides are less likely to degrade within homes due to the absence of moisture, sunlight, and microorganisms (Gunier et al., 2011; Ritz and Rull, 2008), and humans can be subsequently exposed via dermal contact and ingestion (Gunier et al., 2001).

questionnaires at enrollment (1993-1997). ESRD cases were identified via linkage to the United States Renal Data ...

### **Pesticide exposure and end-stage renal disease risk among ...**

We conducted exposure-response analyses for pesticides with reported lifetime years of use. Results: There was an increased aggressive PCa risk among ever users of the organodithioate insecticide dimethoate (n = 54 exposed cases, HR = 1.37, 95% CI = 1.04, 1.80) compared to never users.

### **Pesticide exposure and risk of aggressive prostate cancer ...**

Introduction. Migrant and seasonal farmworker occupational exposure to pesticides is widely acknowledged [Arcury & Quandt 2009; Quandt et al. 2006; Arcury et al. 2009a; Calvert et al. 2008], and this occupational pesticide exposure is considered an important health risk for farmworkers and their families [McCauley et al. 2006; Villarejo 2003]. However, no published biomarker data document the ...
