Four Ways to Use Snapshots in Lightroom

One cool trick is to combine both virtual copies and snapshots in order to have everything saved on disk rather than only in the lightroom catalog. Snapshots are saved in the RAW file (for DNGs) or in a sidecar (XMP) file for other RAW formats. All the snapshots created on virtual copies are visible in the snapshots list of the original photo.

In all actuality, Lightroom uses the Camera Raw engine, so it only makes sense that both of these applications have many of the same features and tools. The Snapshots feature in Lightroom is virtually identical to the one in Camera Raw and just as luck would have it, I've already written a post about the latter.

How to Create, Rename & Delete Snapshots in Adobe Lightroom

Well, I am well aware of the different between snapshots and virtual copies and I am using both methods in my workflow. Snapshots are great to save my different presets of a picture, while I find it a lot more comfortable to use VC's for final exporting. Problem with VC's is, that they are saved in the catalog and not in the file, so since I am often working with differen catalogs on the same ...

I'm using the latest version of Lightroom Classic CC. Snapshots save everything except for the enabling preferences of the tone curve. If 'snapshot 2' is saved with disabled tone curve, once I click on another snapshot, clicking 'snapshot 2' results in a snapshot with all settings except disabled tone curve.
