## Synthesis And Properties Of **Novel Gemini Surfactant With Properties Of Novel**

This paper reviews the achievements in the field of synthesis of new thermally resistant explosive compounds in the years 2009 through 2019. The performance characteristics of these compounds (sensitivity, thermal decomposition parameters, and detonation parameters) were compared with those of

spectral properties have been studied. Series 2 with four methyl groups at 1,3,5,7-positions show much higher fluorescence quantum yields and extinction coefficients than series 1 (without methyl groups). The “push-pull” electronic effect caused by the methyl groups at 3 and 5 positions is a significant positive factor to the high
