Track Circuit Alstom

A comprehensive line of point machines. Alstom offers an extensive line of point machines for wayside and yards, comprising state-of-the-art machines for urban, mainline and freight and mining operators. The portfolio encompasses traditional and in-tie, trailable and non-trailable point machines, both electro-mechanical and electro-hydraulic, all proven in use in light and heavy rail application, with different types of gauges, and compliant with all major railway standards.

A track circuit is a traffic detection system. This device, fitted to the rails, applies an electrical voltage to a given section of rail. When a train passes by, this causes a short-circuit. It is therefore possible to detect the arrival of a train in that particular section.

Alstom has been awarded a contract worth 28 million by MTR[1] Corporation to replace the track circuits of five MTR lines[2] and Airport Express in Hong Kongs metro network by early 2019. Metro track circuits, which are part of the signalling system, are used to ensure the integrity of the rails and detect the position of the trainsets on the lines.

Principles and operation. The basic principle behind the track circuit lies in the connection of the two rails by the wheels and axle of locomotives and rolling stock to short out an electrical circuit. This circuit is monitored by electrical equipment to detect the absence of the trains. Since this is a safety appliance, fail-safe operation is crucial; therefore the circuit is designed to indicate the presence of a train when failures occur.
