Between 1823 and 1880 in Lowell, the dynamic application of waterpower was developed, studied intensively, and improved upon to an extent unknown anywhere else in the world. Lowell's nearly six-mile canal system grew gradually, beginning with a shallow transportation canal in 1796 used for power only by a few small textile mills.

## **Lowell Waterpower System | ASCE**

A city built on waterpower, Lowell, Massachusetts was a major symbol of U.S. manufacturing prowess in the 19th century. In this book, Malone (Urban Studies and American Civilization, Brown University) shows how innovative engineering was a major factor in Lowell's rise, transforming a farming village into a center for textile production and machine building.
