In theory, 5G technology will shave latency down to a few milliseconds. That said, 5G networks are still in their early stages. So in some areas, it can be even slower than 4G to start.

Multimedia

coexist as critical wireless technologies for the enterprise. It will, however, be a challenge at first to find ways to manage networks as users and devices move between them. The two technologies are highly complementary, and will be even more so when network management tools evolve to handle them side-by-side.

Multimedia

According to [www.techconsumerguide.com/](http://www.techconsumerguide.com/), with this type of technology, people and other entities can communicate over very long distances.

Wireless technology includes RF and IR waves. RF and IR stand for radio frequency and infrared respectively.
